

The Dingle Primary School/Power Maths White Rose Edition calculation policy, UPPER KS2

The following pages show the *Power Maths White Rose Edition* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths White Rose Edition* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods. In Key Stage 2, these methods are supplemented with calculation methods used in the 'Target Your Maths' materials.

KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

 Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage. Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods. Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen. 	 Multiplication and division: Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers. Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000. Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions. Multiplication and division of decimals are also introduced and refined in Year 6. 	 Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them. Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic. Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

Year 5 Multiplication			
Understanding factors	Use cubes or counters to explore the meaning of 'square numbers'.	Use images to explore examples and non- examples of square numbers.	Understand the pattern of square numbers in the multiplication tables.
	25 is a square number because it is made from 5 rows of 5.	$8 \times 8 = 64$	<i>Use a multiplication grid to circle each square number. Can children spot a pattern?</i>
	Use cubes to explore cube numbers.	$8^2 = 64$	

	8 is a cube number.	12 is not a square number, because you cannot multiply a whole number by itself to make 12.	
Multiplying by 10, 100 and 1,000	Use place value equipment to multiply by 10, 100 and 1,000 by unitising.	Understand the effect of repeated multiplication by 10. $7 \times 10 = 70$ $7 \times 100 = 7,000$ $7 \times 1,000 = 70,000$	Understand how exchange relates to the digits when multiplying by 10, 100 and 1,000. $\begin{array}{r rrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrr$
Multiplying by multiples of 10, 100 and 1,000	Use place value equipment to explore multiplying by unitising.	Use place value equipment to represent how to multiply by multiples of 10, 100 and 1,000.	Use known facts and unitising to multiply. $5 \times 4 = 20$ $5 \times 40 = 200$ $5 \times 400 = 2,000$ $5 \times 4,000 - 20,000$ $5,000 \times 4 = 20,000$

Multiplying decimals by 10, 100 and 1,000	Use place value equipment to explore and understand the exchange of 10 tenths, 10 hundredths or 10 thousandths.	Represent multiplication by 10 as exchange on a place value grid. $\begin{array}{c} \hline \\ \hline $	$1,274 \times 32 = 40,768$ Understand how this exchange is represented on a place value chart. $2 \cdot 5 \times 10 = 25$ $2 \cdot 5 \times 10 = 250$ $2 \cdot 5 \times 100 = 250$ $2 \cdot 5 \times 1,000 = 2,500$ $2 \cdot 5 \times 1,000 = 2,500$

Year 5 Division			
Understanding factors and prime numbers	Use equipment to explore the factors of a given number.	Understand that prime numbers are numbers with exactly two factors.	Understand how to recognise prime and composite numbers.
		$13 \div 1 = 13 13 \div 2 = 6 r 1 13 \div 4 = 4 r 1$	I know that 31 is a prime number because it can be divided by only 1 and itself without leaving a remainder.
	$24 \div 3 = 8$ $24 \div 8 = 3$	•••••	I know that 33 is not a prime number as it can be divided by 1, 3, 11 and 33.
	8 and 3 are factors of 24 because they divide 24 exactly.	1 and 13 are the only factors of 13. 13 is a prime number.	I know that 1 is not a prime number, as it has only 1 factor.
	24 ÷ 5 = 4 remainder 4.		
Understanding inverse operations and the link with	Use equipment to group and share and to explore the calculations that are present.	Represent multiplicative relationships and explore the families of division facts.	Represent the different multiplicative relationships to solve problems requiring inverse operations.
multiplication, grouping and sharing	I made 7 groups of 4. There are 28 in total.		$12 \div = 3$ $x = 12$ $x = 3$ $x = 12$ $x = 3$ $x = 12$ $x = 3$

Subtracting mentally with larger numbers	Use a bar model to show how unitising can support mental calculations. 950,000 – 150,000 That is 950 thousands – 150 thousands	Subtract efficiently from powers of 10. 10,000 - 500 = ?

Year 6 Multiplication		950 150 800 So, the difference is 800 thousands. 950,000 - 150,000 = 800,000	
Multiplying up to a 4-digit number by a single digit number	Use equipment to explore multiplications. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	Use place value equipment to compare methods. Using knowledge of factors and partitions to compare methods for multiplications	Use equipment to understand square numbers and cube numbers. $5 \times 5 = 5^2 = 25$ $5 \times 5 \times 5 = 5^3 = 25 \times 5 = 125$	Compare methods visually using an area model. Understand that multiple approaches will produce the same answer if completed accurately.	Use a known fact to generate families of related facts. $\begin{array}{c c} 170 \times 11 & 171 \times 11 \\ 170 \times 12 & 170 \times 11 = 170 \\ 170 \times 12 & 170 \times 110 \\ 170 \times 110 \times 110 \times 110 \times 110 \\ 170 \times 110 \times 1$
Multiplying by 10, 100 and 1,000	Use place value equipment to explore exchange in decimal multiplication.	Understand how the exchange affects decimal numbers on a place value grid.	Use knowledge of multiplying by 10, 100 and 1,000 to multiply by multiples of 10, 100 and 1,000. $8 \times 100 = 800$
